

# Production Test Report

## Complete live-site retest and production-readiness assessment

3 October 2026 | Live origin: <https://comparemytrip.in> | Current workspace revision: fc228ad

### Release decision: NOT READY for paid production bookings

The public site is serving 70 published packages and all 137 sitemap URLs. Release approval is blocked by a reproducible false package-payment receipt, payment handoff despite failed booking persistence, and pending-payment cleanup that deletes unresolved bookings. Checkout also promises free cancellation against a stricter package-specific policy. Several linked images and package pages are broken.

| PUBLIC SITE       | SITEMAP                                         | LIVE ASSET CHECK                                                          | AUTOMATED TESTS        |
|-------------------|-------------------------------------------------|---------------------------------------------------------------------------|------------------------|
| HTTP 200 / Vercel | 137 / 137 return 200; one canonical and h1 each | 425 / 425 first-party references return 200; 2 external images return 404 | 452 / 452 pass locally |

### What this report covers

Fresh build, unit tests, lint, type-check, Google sign-in configuration, current CMS package count, production HTTP crawl, internal navigation and metadata, public asset availability, mobile and desktop browser observations, key customer journeys, empty-form validation, payment boundary checks and retests against the previous report. No live enquiry, account mutation or payment was submitted.

# Executive findings

| PRIORITY                | FINDING                                                                                                                                                      | STATUS                           |
|-------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------|
| P0 / payment integrity  | A query-string-only package receipt says "Payment received" for an invented transaction.                                                                     | REPRODUCED live                  |
| P0 / payment durability | Offline execution of the current initiation route still hands the customer to PayU after pending-booking storage returns false or throws.                    | REPRODUCED with mocks            |
| P0 / reconciliation     | Offline execution of current cleanup deletes a package booking when PayU explicitly reports payment pending.                                                 | REPRODUCED with mocks            |
| P1 / customer terms     | Kurinjal page states 50% refund at least seven days ahead and no refund within seven days; checkout states "Free cancellation".                              | REPRODUCED live                  |
| P1 / content integrity  | 15 published listings show nights greater than days; two R2 package images return 404; seven linked routes return 404.                                       | REPRODUCED live                  |
| P1 / email readiness    | Local release check fails because RESEND_API_KEY is absent. This is not proof of the Vercel secret state.                                                    | OPEN / deployment check required |
| P2 / content confidence | Kurinjal displays a 4.8 score and four named traveller reviews; authenticity and permission were not verified.                                               | Owner verification required      |
| P2 / test contract      | The checked-in smoke suite fails against live /packages because it expects s-maxage; Vercel currently returns public max-age=0 and x-vercel-cache=PRERENDER. | Test/hosting contract mismatch   |

## Work required before accepting payments

- Make package success receipts depend on a verified persisted transaction.
- Require durable booking creation before producing a signed gateway handoff.
- Retain pending gateway transactions for later reconciliation; delete only terminal, verified outcomes.
- Align cancellation messaging with each actual package policy and approved customer terms.
- Repair dead catalogue links and upload the two missing public images.
- Verify the deployed Resend secret and receive both traveller and operations emails in a PayU sandbox acceptance run.

Do not treat the 452 passing repository tests as a production acceptance sign-off; the probes above exercise real failure paths that the unit count does not cover.

# Evidence, environment and limits

| SURFACE                    | WHAT WAS CHECKED                                                                                                                                                                                                                                                  | EVIDENCE CLASS        |
|----------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------|
| Live production            | Browser and read-only HTTP access to https://comparemytrip.in. Vercel host. Response carried current public homepage, package catalogue and current CMS data.                                                                                                     | LIVE / BROWSER / HTTP |
| Public route inventory     | 332 exact page, query, sitemap, route-negative and API-boundary observations; 3 concurrent read-only HTTP requests. Every sitemap route was separately evaluated.                                                                                                 | LIVE / HTTP           |
| Public assets              | 425 local image/script/style URLs checked with HTTP HEAD; 15 public R2 image and brochure URLs checked.                                                                                                                                                           | LIVE / HTTP           |
| Browser journeys           | Desktop layout at 1440 px; mobile emulation at 390 px. Home search, filter/sort, package, gallery, date and traveller count, checkout, all add-on tabs, cruise modal, mobile nav/filter, contact form validation, comparison, custom receipt, itinerary download. | LIVE / BROWSER        |
| Local checks               | 452 Node tests, ESLint, TypeScript, build, asset/content gates, Google auth config, live smoke, release checks.                                                                                                                                                   | LOCAL / AUTOMATED     |
| Payment fault probes       | Current PayU initiation and pending cleanup modules executed with mocked storage/gateway. No transaction was created, and no gateway received a request.                                                                                                          | OFFLINE / MOCKED      |
| Previous report            | 23-page test report 2 and 10-page original report reviewed. Previous findings were retested; old metrics are treated as historical.                                                                                                                               | SOURCE REVIEW         |
| Current code vs deployment | Repository revision is fc228ad. A verified Vercel deployment SHA was not available from read-only evidence; local checks are not represented as proof that this exact workspace revision is deployed.                                                             | LIMIT                 |

## Safety and exclusions

No valid enquiry, quote, cruise request, contact message, upload, email, account change, CRM action, checkout submission, PayU gateway request, payment, refund, or booking was performed. Payment acceptance tests require a controlled sandbox account. Physical iOS/Android, Safari, Firefox, assistive-technology, authenticated admin workflows, load, recovery, disaster, and region/latency tests were not completed.

## Network and content cautions

The browser session had an existing signed-in customer profile. Its personal values are excluded from this report. Tests against public routes and empty form validation did not send that data.

# Build and configuration

| CHECK                        | RESULT                    | DETAIL                                                                                                                                                                                                                                                                   |
|------------------------------|---------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Repository tests             | PASS                      | npm test: 452 passed, 0 failed, 0 skipped. 8.2 seconds.                                                                                                                                                                                                                  |
| ESLint                       | PASS                      | npm run lint completed without errors or warnings.                                                                                                                                                                                                                       |
| TypeScript                   | PASS                      | npm run tsc --noEmit --incremental false completed with no diagnostics.                                                                                                                                                                                                  |
| Production build             | PASS with warnings        | npm run build generated 194 static routes/pages. Build completed and current CMS gate confirmed 70 packages and 10 blog records.                                                                                                                                         |
| Asset budget                 | PASS                      | 145 public assets, 48.60 MiB. All budget checks passed.                                                                                                                                                                                                                  |
| Google sign-in configuration | PASS (configuration only) | Eight checks passed: Firebase public auth configuration, both custom authorized domains, handler/iframe, service-account project match, Google provider enabled with OAuth client. No consent/sign-in was performed.                                                     |
| Release configuration        | FAIL                      | npm run check:release reports missing RESEND_API_KEY. A payment can succeed while confirmation email sending is skipped.                                                                                                                                                 |
| Live release configuration   | FAIL                      | npm run check:live reports missing RESEND_API_KEY. Other local gates did not report missing payment/legal settings. This reads the local environment, not Vercel production secrets.                                                                                     |
| Content build gate           | PASS                      | 70 published packages and 10 blog records verified from CMS; production seed fallback disabled for failed required content.                                                                                                                                              |
| Live HTTP smoke              | FAIL: stale assertion     | The checked-in npm run test:smoke expects s-maxage on /packages. Live Vercel returns Cache-Control: public, max-age=0, must-revalidate plus x-vercel-cache: PRERENDER. The failure is a smoke/hosting-header contract mismatch, not proof that page content is uncached. |
| Cloudflare build             | NOT RUN                   | Vercel is the observed current host. Cloudflare is an alternate checked-in path and is outside the current deployment test.                                                                                                                                              |
| Framework warning            | NON-BLOCKING              | Next.js 16.3.8 warns that the middleware filename convention is deprecated in favour of proxy. Build also reports an Edge Runtime process.cwd warning in dependency import trace.                                                                                        |

## Response controls observed

| CONTROL                   | LIVE RESULT                                          |
|---------------------------|------------------------------------------------------|
| Strict-Transport-Security | Present                                              |
| X-Frame-Options           | DENY                                                 |

# Sitemap, pages and links

| MEASURE                        | RESULT                                                                     | INTERPRETATION                                                                                                                                             |
|--------------------------------|----------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Advertised sitemap URLs        | 137 / 137 returned HTTP 200                                                | All have exactly one h1, canonical URL matching the requested route, and are not noindex.                                                                  |
| Expanded page/API observations | 332 unique exact URLs: {200: 301, 307: 2, 308: 3, 401: 4, 404: 21, 405: 1} | Includes sitemap, homepage-discovered paths and variants, metadata resources, unknown-page negative probes, redirect aliases and anonymous API boundaries. |
| Published CMS catalogue        | 70 published packages; 10 posts                                            | Content endpoint /api/content served package/post JSON.                                                                                                    |
| Intentional route negatives    | 21 HTTP 404 observations                                                   | Expected for nonexistent packages/destinations/blog, retired aliases and private admin/integration endpoints.                                              |
| Expected redirects             | 5 legacy path redirects observed                                           | /account/saved to /account; /admin/homepage to /admin/content; /deals to /packages?deals=1; /faqs to /#faq; /coming-soon to /.                             |

## Dead links on public pages

No public internal link to a 404 target was found.

## Other negative-path results

Unknown package, destination, blog, and retired duplicate-homepage probes return 404. Anonymous payment-report calls return 401, admin payment report and Google Business private route return 404, cron jobs return 401, and GET to POST-only /api/quotes returns 405. These are expected boundary or method outcomes, not defects.

## Crawl and content cache observations

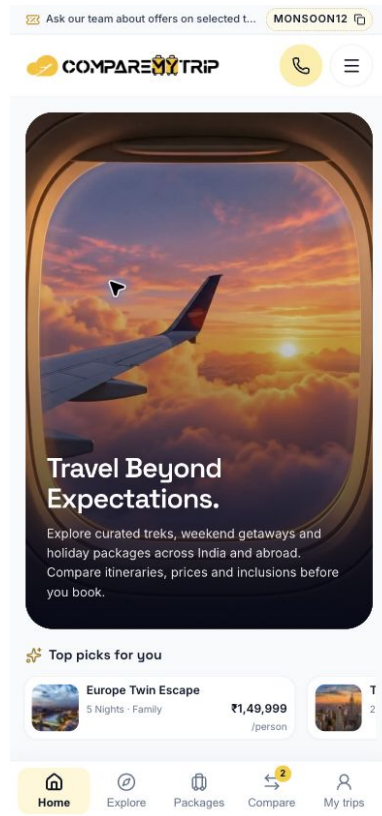

The homepage and /packages are prerendered and GZIP encoded by Vercel. The API content response had a cache MISS on this observation. This report does not infer global cache freshness, publish-time revalidation latency, search-engine indexing, or CDN consistency from one sample.

# Functional and browser checks

| JOURNEY                        | RESULT                  | DETAIL / LIMIT                                                                                                                                                                               |
|--------------------------------|-------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Home destination search        | PASS                    | Kerala search opened /packages?q=Kerala&travellers=2 and returned one matching package.                                                                                                      |
| Catalogue price sorting        | PASS                    | Low-to-high placed INR 799 packages first; high-to-low placed INR 224,999 first.                                                                                                             |
| Destination filter             | PASS                    | A nonexistent query displayed "No destination matches that." Kerala filtering returned one package.                                                                                          |
| Package compare button/picker  | PARTIAL                 | Shortlist/picker UI opens with published packages; no additional comparison state was persisted during this audit.                                                                           |
| Package date selection         | PASS                    | Kurinjal date picker offered Fridays; Fri, 9 Oct 2026 selection carried through to the checkout URL.                                                                                         |
| Traveller price calculation    | PASS                    | Increasing two to three travellers changed the displayed total from INR 6,798 to INR 10,197.                                                                                                 |
| Package to checkout            | PASS                    | The current CMS package ID resolved to the published package; package, date, three traveller count and server-rendered price appeared at checkout.                                           |
| Payment initiation             | NOT EXECUTED            | No payment button was clicked, and no sandbox/live payment was attempted.                                                                                                                    |
| Package gallery                | PASS (current behavior) | Opening focused the close control; Tab stayed inside dialog; Escape closed it and focus returned to the opener. Kurinjal has one image, so multi-image navigation was not assessed.          |
| Itinerary PDF                  | PASS                    | Downloaded 7-page, 487,040-byte PDF; PDF info, all extracted pages and a rendered contact sheet were reviewed. Trek itinerary, cancellation section and publication details render.          |
| Contact incomplete form        | PASS                    | Empty trip-description and unchecked required policy consent produced validation errors, focused the first error, and made no enquiry.                                                       |
| Add-on empty forms             | PASS                    | Flights, hotels, visa, transport and bring-your-quote forms marked required controls invalid; no data was transmitted.                                                                       |
| Cruise incomplete modal        | PASS                    | Quote modal opened and Escape closed it. Empty submission stayed blocked by booking timeline validation.                                                                                     |
| Custom payment required fields | PARTIAL                 | Browser showed empty amount and agreement checkbox as natively invalid. Payment CTA was not clicked.                                                                                         |
| Custom payment receipt         | PASS                    | Unknown reference with state=success correctly said "Payment is not yet confirmed."                                                                                                          |
| Package payment receipt        | FAIL / P0               | Invented reference with state=success said "Payment received" and echoed arbitrary item/amount from the URL; reproduced on live site.                                                        |
| Mobile navigation/filter       | PASS                    | Navigation drawer opened; filter drawer held focus, returned one result, and closed on Escape.                                                                                               |
| Authenticated user/admin       | NOT EXECUTED            | A customer session existed in the browser. No profile changes or admin CMS records/actions were accessed.                                                                                    |
| Visual errors                  | PARTIAL                 | No broken images among completed visible browser loads on sampled pages. Full asset check separately found two R2 404s. No accessibility conformance or screen-reader certification claimed. |

## Responsive coverage

390 px mobile: homepage, destinations index, Kerala destination, blog index, Munnar blog article, Bengaluru trek collection, corporate trips, terms, privacy, refund policy, catalogue, add-on and cruise page. Desktop 1440 px: homepage, destinations index/detail, blog index/article. Package page and checkout were also rendered. No horizontal scroll was reachable; homepage animated cards extend the DOM scroll-width measurement by 40 px while the document clips overflow.

Live mobile homepage viewport. The animated horizontal picks rail is clipped within the viewport.

# Critical release findings

## P0-01 | CRITICAL | Package receipt trusts the URL

Observed: A direct GET to `/checkout/status?state=success&txnid=QA-NO-PAYMENT-20261003&amount=1&item=QA` displayed "Payment received." This reference was invented. No matching booking/payment existed. The custom-pay receipt rejects the same pattern.

Evidence: Live browser; screenshot/text in audit evidence. Current source: `src/app/checkout/status/page.tsx`; comparison: `src/app/pay/status/page.tsx`.

Impact: Fabricated confirmation undermines payment support and presents attacker-controlled amount/package details as a receipt. It does not prove or cause a PayU debit.

Acceptance: Resolve the reference against a durable stored booking and verified successful settlement. Unknown, pending, failed and amount-mismatched references must never claim payment received.

## P0-02 | CRITICAL | PayU handoff continues when booking storage fails

Observed: The current `/api/payu/initiate` route was executed offline with `createPendingTrip` mocked to return false and to throw. Both scenarios returned a signed sandbox PayU form (HTTP 200). Additional probes accepted malformed email, a 40-digit phone, and an invalid supplied ID token.

Evidence: Current source executed with mock dependencies; `tmp/audit-2026-10-03/payment-probe.mjs` and `payment-probe.log`. No real storage, booking, request to PayU or customer record used.

Impact: A traveller can pay before a durable booking is stored; invalid details or expired identity can create bad or ownerless booking data.

Acceptance: Require `createPendingTrip` to return success before constructing a gateway form; validate bounded contact fields server-side; treat a supplied invalid token as an explicit recoverable error. Keep guest checkout explicit.

## P0-03 | HIGH | Pending cleanup deletes an unresolved attempt

Observed: The current cleanup module, with a mocked PayU state of pending for a package attempt beyond TTL, returned `deleted=1` and the record was removed.

Evidence: Current source executed offline with a transactional in-memory store and mocked gateway. Evidence in `pending-probe.mjs/log`.

Impact: A pending or late-success transaction loses the original booking snapshot needed for reconciliation and customer support.

Acceptance: Retain/archival-snapshot unresolved gateway attempts. Delete only a verified terminal outcome and test pending, gateway outage, late success and retry recovery.

## P1-01 | HIGH | Cancellation promise contradicts chosen package terms

Observed: Kurinjal detail says bookings at least 7 days ahead are eligible for only a 50% refund; within 7 days is non-refundable. Checkout summary says "Free cancellation." The public refund policy says there is no blanket free-cancellation promise.

Evidence: Live package detail and checkout browser; `/refund-policy` HTML; current `CheckoutPanels.tsx` and package-specific cancellation copy.

Impact: A traveller may rely on a refund promise that the product page and policy do not grant.

Acceptance: Remove or condition the generic checkout claim. Show that package's exact terms beside the amount and require customer confirmation before any future payment integration.

## Earlier payment finding retest

S02 "checkout uses only seed package data" is no longer observed: the live CMS package Kurinjal uses its current document ID, price and selected date at checkout. This does not clear P0-02 storage durability or P1-01 cancellation semantics.

The invented-receipt issue (previous S01) and failed-storage handoff (previous S03) remain open.

# Assets, accuracy and customer trust

## P1-02 | HIGH | Published trip durations conflict

Observed: 15 of 70 published records have nights greater than days, producing impossible values such as 3N / 2D or 4N / 2D. These values appear in package catalogue cards and the comparison picker.

Evidence: Live /api/content snapshot; full list is in the appendix. Count compares published CMS nights/days fields.

Impact: Customers can misjudge itinerary length, fares and time away.

Acceptance: Review each published package against supplier itineraries; validate days  $\geq$  nights + 1 for overnight trips (with explicit exceptions if the domain permits otherwise) before publishing.

## P1-03 | MEDIUM | Two public package images are missing

Observed: R2 returns HTTP 404 for package images on /packages/glimpse-of-himachal and /packages/sun-sand-sea-the-andaman-island-hop.

Evidence: 15 externally hosted R2 image/brochure URLs checked; 13 returned 200 and 2 returned 404. 425 first-party asset references returned 200.

Impact: Those package cards/details may show broken or fallback imagery and reduce trust.

Acceptance: Restore correct objects or point the published package image fields at a verified asset, then recheck card, detail, and social metadata image URLs.

## P1-04 | MEDIUM | Seven site-linked routes return 404

Observed: A public /bengaluru link reaches a missing index; six package detail paths linked on live pages return 404. Other missing-resource probes were intentionally constructed and are expected 404s.

Evidence: Live internal-link crawl; full sources and routes listed in appendix.

Impact: Visitors can follow visible links to a dead end; crawlers encounter broken internal links.

Acceptance: Add a Bengaluru landing page or redirect the link to /bengaluru/treks. Update/remove stale package references or restore the intended listings; crawl links again.

## Kurinjal ratings require verification

Kurinjal's page presents a 4.8/5 score "Based on 4 traveller reviews" with reviewer first names/initials and testimonial prose. This audit did not verify that these are actual customers, that their statements are accurate, or that publication consent exists. Do not call these false without evidence; the owner must provide the source records and permission or replace them with verified reviews.

## Catalogue cleanup

The 70 published CMS records include inconsistent spelling and route text ("Colomobo", "Ladak", "Uttarkhand", "Weddays only"), disparate day counts, and content that could use copy review. This is a data stewardship task; no CMS edits were made.

## Previous findings retested

| PREVIOUS ID                     | CURRENT RESULT                                                                                                                                                                                                                 |
|---------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| N1 CMS quota / seed fallback    | Improved: this build's content check passed for 70 packages/10 posts; no quota fallback seen.                                                                                                                                  |
| H5 App Check enforcement        | Not verified in production. Read-only browser tests do not establish Firebase console enforcement or anti-abuse effect.                                                                                                        |
| B5 private quote bucket         | Live signed PDF attachment lifecycle, access restriction and expiry were not exercised.                                                                                                                                        |
| B6 legal content                | Terms/refund/privacy content is present and includes business contact information. Each route still carries noindex; owner/legal approval and intended indexing must be verified.                                              |
| A01 form required semantics     | Contact and add-on forms reject missing required fields; contact uses aria-required on some controls. Checkout fields in rendered DOM lack HTML required/aria-required attributes. Full accessibility acceptance remains open. |
| A02 gallery focus               | Fixed in current sample: focus is placed inside gallery, Tab remains in the dialog, Escape closes and returns focus.                                                                                                           |
| A03 fractional traveller count  | Current quote form imports integer validation helper; source/unit tests cover it. No authenticated quote was sent.                                                                                                             |
| S04/S05/S06 payment reliability | Invalid payment-input and cleanup risks reproduced; Resend is locally absent; live email receipt is unverified.                                                                                                                |
| P01 add-on sitemap              | The live sitemap has 137 entries; verify whether the indexable /add-on should be included. It was not asserted as a current defect without the current indexing decision.                                                      |

# Controls and open verification

| AREA                   | OBSERVED                                                                                                                     | LIMIT                                                                                            |
|------------------------|------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------|
| TLS / headers          | HTTPS, HSTS, frame denial, nosniff, strict referrer, permissions restrictions, enforced frame-ancestors/object-src/base-uri. | One edge response/header set. Does not certify all alternate hostnames or all routes.            |
| CSP                    | A narrow enforced CSP and a broader report-only policy are present.                                                          | Do not describe report-only directives as enforced.                                              |
| Anonymous private APIs | Cron endpoints return 401. Admin payment report/integration endpoint return 404. Account payment reports return 401.         | Only anonymous GET boundary probes; no deployed admin/customer write/read test.                  |
| Auth configuration     | Firebase Google provider enabled; custom domains authorized; auth helper endpoints return 200.                               | No OAuth consent, popup cancel, new user, account linking, reset email or browser-platform test. |
| Customer data / admin  | Guest-only behavior is not tested from the existing signed-in session. No CRM page was mutated.                              | Deployed Firestore rules equivalence and authenticated ownership/revocation remain unverified.   |
| Public enquiry writes  | Validation was tested in browser without submitting completed fields. Rules and source bound schemas.                        | No rate-limit, App Check enforcement, duplicate handling, abuse or storage durability tests.     |
| Quote PDF upload       | Public page offers optional PDF and says 72-hour deletion.                                                                   | No file upload or private bucket access/expiry/cron was tested.                                  |
| Cron schedule          | Unauthenticated cron requests rejected; Vercel configuration schedules two daily jobs.                                       | No authenticated job ran against real records; no completion logs or record outcome available.   |
| Credentials / secrets  | Secret values were not output. Local `check:release` detects missing Resend key.                                             | No Vercel secret inventory/read access; local absence is not evidence of deployed absence.       |

## No load or Web Vitals conclusion

No controlled Lighthouse, LCP/INP/CLS, browser performance trace, traffic ramp, concurrency, database quota or failover exercise was run. A single Vercel cache-hit header and one route crawl cannot establish capacity or regional latency. Previous reports' numeric performance results remain historical.

## Privacy

Browser screenshots containing checkout/account content were not embedded. The generated report contains no signed-in user contact details. The downloaded itinerary is stored only in the ignored audit evidence directory.

# Acceptance gates in priority order

| ORDER   | ACTION                                                   | PASS CRITERION                                                                                                                                                                         |
|---------|----------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1 / P0  | Fix payment receipt authority.                           | Unknown, URL-edited, pending and failed references never show a paid result. Verified stored success and amount match do.                                                              |
| 2 / P0  | Make booking persistence a precondition to PayU handoff. | False or thrown storage errors never yield signed gateway HTML. Valid and deliberately guest flows are distinguishable; invalid supplied identities are rejected.                      |
| 3 / P0  | Retain unresolved payment attempts.                      | Pending, unknown and unavailable gateway states keep a complete booking snapshot. Late callbacks reconcile idempotently.                                                               |
| 4 / P1  | Align terms and checkout.                                | Package cancellation conditions match every price step and the approved business refund policy.                                                                                        |
| 5 / P1  | Repair content references.                               | All currently published image URLs return 200; all public internal links reach intended 200/redirect pages; package duration fields approved.                                          |
| 6 / P1  | Prove email operations.                                  | Vercel secret, sender domain and recipients are configured. A sandbox success sends traveller acknowledgement and desk notification; failed/missing email is observable and retryable. |
| 7 / P1  | Run end-to-end sandbox acceptance.                       | Valid payment success/failure/cancel/pending/retry/duplicate/late callback, correct amount, coupon, stored account history, email, and verified receipt all pass.                      |
| 8 / P2  | Complete account/admin acceptance.                       | Customer identity, reset, profile and trip ownership; admin permission/revocation, CMS publish/edit and enquiry workflows pass against deployed rules.                                 |
| 9 / P2  | Accessibility and service acceptance.                    | Required state, label/error association, focus, keyboard, mobile touch targets, screen reader and real iOS/Android test pass.                                                          |
| 10 / P2 | Update quality gates.                                    | Fix /packages cache assertion to match documented Vercel contract; run production smoke and verify expected statuses/content on exact deployment SHA.                                  |

## Production status

Public browsing is live and key read-only customer journeys work. Paid booking launch remains on hold until payment integrity and checkout cancellation defects are fixed and the configured deployment email + sandbox acceptance are verified.

# All advertised routes

137 advertised URLs were requested. Every route returned HTTP 200, had one h1, a matching canonical and no noindex directive. Exact path inventory below. Query variants and negative/admin/API probes are in Appendix C.

# Published duration anomalies

15 published package records report more nights than days. This does not assume that every special fixed-departure product follows a single formula; the travel owner should verify each one against the confirmed itinerary.

| TITLE                                                   | NIGHTS | DAYS | LIVE URL                                                      |

Some slugs are derived from a human title and may not be the canonical URL when legacy redirects or CMS aliases exist; use the exact detail-page paths in Appendix A for canonical sitemap entries.

# Exact expanded HTTP observations

All 332 observations and status classes: {200: 301, 307: 2, 308: 3, 401: 4, 404: 21, 405: 1}. This list includes sitemap pages, current homepage links, query-filter variants, exact negative probes, APIs and redirect aliases. 404/401/405 rows are deliberate negative or boundary checks unless called out as broken public links in the findings.
